

The background of the slide is a gradient of purple, transitioning from a dark purple on the left to a lighter purple on the right. Overlaid on this gradient are several thin, black, concentric curved lines that resemble the cross-sections of a sphere or a series of nested, rounded rectangular shapes. These lines are more densely packed on the left side and become more widely spaced towards the right.

100 random slices

September the 2nd, 2017 — Vasilis van Gemert

Every day my webserver generates a new book, filled with sliced blobs of a random colour that turn into rectangles in ten steps. The blobs might have a border, and this border, if it exists, is either black or white. The ten steps follow a certain ratio. This ratio is one of the twelve so called excellent orthogons: The Quadrat, the Hemidiagon, the Trion, the Quadriagon, the Biauron, the Penton, the Diagon, the Bipenton, the Hemiolion, the Auron, the Hecton, and the Doppelquadrat.

Created for Vasilis van Gemert — and you — by his webserver.
